DETAILED ACTION

Claim Objections

Claim 2 is objected to because of the following informalities: line 1: "claim 1wherein" and line 2 "frther". Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Meltser et al. (USPN 5,763,113).

Meltser et al. discloses a method and apparatus for monitoring the hydrogen and oxygen PEM fuel cell. Outputs from a cell/stack voltage monitor and a cathode exhaust gas H₂ sensor are corrected for stack operating conditions and then compared to predetermined levels of acceptability. If certain unacceptable conditions coexist, corrective measures are automatically undertaken. A drop in voltage signals water flooding. Corrective action may entail a decrease in hydrogen supply or an increase in cathode supply. Hydrogen and oxygen are supplied to the cell in separate flow channels. Additionally an exhaust manifold is present for anode and cathode exhausts. Monitoring includes voltage measurements, a computer (controller). Corrected concentrations are compared to calibration constants to determine if conditions are back
